**Ubi™ is the command centre
for your business energy**

Energy solutions tailored to your needs.

Solar and batteries for business

Solar may help reduce your energy bills by reducing the amount of electricity you need to purchase.

Beyond simply reducing your energy bills there is also the potential to create an additional revenue stream through exporting excess solar energy to the grid.

A battery can be charged using free solar energy or when electricity is cheaper and can even provide energy security during peak periods.

Solar also reduces your emissions and carbon footprint and soon you will be able to share excess energy with the local community group, or sports club.

Working together for a bright future.

Solar monitoring

Energy usage data

Mondo® Ubi™ The smart energy management system

Being more aware of your energy consumption gives you the power to optimise your energy usage, operate more efficiently and save money.

Whether you are monitoring a single building or multiple locations, Mondo® Ubi™ is the smart energy monitoring and management system that delivers timely, accurate information about your energy consumption, accessible online from anywhere.

Mondo® Ubi™ provides you with helpful notifications, including high energy usage alerts and when it might be time to think about adding a battery to your system.

Mondo® Ubi™ also helps you get the most out of your on-site energy systems including solar and battery storage.

By cooperating with an energy retailer Mondo® Ubi™ even makes it possible to intelligently share energy across your organisation or even with other users of Mondo® Ubi™ – forming an energy sharing network.

The highest level of monitoring and control of your energy use, generation and storage.

Together with energy generation and storage assets, Mondo[®] developed Ubi[™] as an advanced energy monitoring and management system that delivers accurate and timely consumption information offering the following features:

Demand response

The provision of multi-level, multi-circuit, real-time energy data and remote access via any web connected device provides the opportunity to respond to market forces or localised demand as soon as the need arises.

Multi-site management

Customise and switch between individual sites or aggregated groups at the click of a button or the swipe of finger, giving you the level of information you need whenever and wherever you need it.

Remote access and control

Direct access to control circuits and energy devices at remote premises via the micro-grid layer or at device level, via the nano-grid layer.

Hints and alerts

Receive helpful hints and alerts via SMS or email to notify you of energy consumption, maintenance requirements or market events.

Multi-tier energy management

Mondo[®] Ubi[™] provides tiered energy management incorporating integrated energy data and control mechanisms to measure process and manage energy at 3 levels.

1. Premise level (nano-grid)
2. Unified energy system level (micro-grid)
3. Network operator level

Detailed energy data visibility

The Mondo[®] Portal provides access to summary and detailed energy data and trends.

Near-Real Time Data

At the core, Ubi is a smart meter with the ability to transmit near-real time data to the Mondo[®] Platform which is cloud based software. This allows users to read, collate, visualise and analyse energy across sites and assets where an Ubi device is installed.

API ready

Direct access to all data via the API interface for integration with BMS and Demand Response.

Choose a purchase option that's right for your business.

Purchase upfront

Get a quality solar system installed by a trusted partner.

Our team of industry leading experts will help you through the whole process of designing and installing a solar system which is right for your business.

We handle all the tricky bits like connecting you up to the grid, metering issues and can help you with any rebates you may be eligible for – you just get on with running your business.

We'll be available whenever you need us for maintenance or other questions.

Power Purchase Agreement

Lock in a guaranteed price on your power regardless of energy prices.

A Solar Power Purchase Agreement, or PPA, is an agreement to purchase electricity generated by a solar system installed at your premises or even somewhere else for an agreed price over a pre-determined period.

In simple terms, a PPA can give you all of the benefits of owning your own solar system without the burden of purchasing upfront.

Mondo will maintain and manage the system throughout the term.

Solar Lease

Pay a fixed monthly fee for a commercial solar system.

By leasing from us you will benefit from all the advantages of having a solar system installed at your business without having to pay large upfront capital costs.

You pay a fixed monthly amount for your solar system and Mondo will maintain and manage the solar system for the life of the agreement.

Why Mondo is the choice for your business.

1. The strongest financial backing and supports means we're here for the long haul.
2. Ubi and Mondo Portal enables energy control and usage optimisation.
3. Engineers will design an optimum solution for you.
4. Experts who understand your business.
5. Strong understanding of electricity connection, network and costs.
6. Experience collaborating with small, medium and large businesses.
7. Flexible ways to pay, from an upfront purchase, to a Solar PPA or Solar Lease.

Empowering a bright future.
